GitHub · Portfolio · LinkedIn
Buenos Aires, Argentina

Software developer at **Interd**, creator of **Lorma** (multi-tenant SaaS used daily by two manufacturing companies) and co-developer of **HonyCars** (CRM with an AI chatbot for car dealerships). I also build low-level systems in **Rust** and **C++20**.

Professional Experience

Interd — Software Developer

Present

Point-of-sale furniture and retail design studio · interd.com.ar

- Designed and built the company website: studio, services, process, and a filterable portfolio of client projects.
- Built the lead-capture form (serverless SMTP, spam protection) and a responsive WebP image pipeline.

Tech: Next.js 16, React 19, TypeScript, Tailwind CSS v4, Motion, Nodemailer, Vercel

Lorma — Creator & Lead Developer

01/2025 – Present

Multi-tenant ERP for manufacturing and production companies · used daily by **Interd** and **Claxon** · lorma.site

- Built a **14-module ERP**: quotes, sales, purchasing, inventory, production scheduling, and treasury, with isolated workspaces per company.
- Engineered a **2D cutting optimization engine** that packs panels onto sheets and computes edge banding to minimize waste.
- **AI invoice capture with Jev (TypeSafe)**: code extracts candidate amounts, dates, and tax IDs; the model only picks among them, so it can't invent figures.
- **PostgreSQL Row-Level Security** and role-based access; **Supabase Realtime** syncs workshop queues across tablets.

Tech: React, Vite, Node.js (serverless), Prisma, PostgreSQL, Supabase, Jev (TypeSafe), Tesseract.js, Tailwind CSS, Vercel

HonyCars — Co-developer

Present

Multi-tenant CRM for car dealerships · honycars.com

- Unified lead inbox (WhatsApp, Instagram, Mercado Libre, email, web) with assignment and follow-ups per salesperson.
- **"Hony" AI chatbot** that answers on WhatsApp from real stock, rejects unsupported figures, and hands off to a person.
- Stock management, PDF quotes, and funnel metrics: first-response time, team ranking, and lost-sale reasons.

Tech: Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, Next.js, React 19, LLM APIs (OpenAI, Anthropic, Groq), Docker

Projects

LLM Inference Engine

Rust

- Transformer inference engine from scratch in pure Rust, no ML frameworks: GGUF parsing via mmap, GQA attention, RoPE, a KV cache with zero-allocation decoding, and INT8/INT4 quantization.

Concurrent LRU Cache

C++20

- Thread-safe cache with amortized O(1) lookup and eviction, using a reader-writer lock (std::shared_mutex); tested with GoogleTest.

Education

Systems Analyst — Universidad Da Vinci — 08/2025 – Present

Artificial Intelligence Specialization — Samsung Innovation Campus — 07/2025 – 11/2025

IT Technician, 7-year technical degree — Instituto Técnico Industrial San Judas Tadeo — 2018 – 2024

Databases (SQL Server, MySQL, Oracle), low-level programming in C/C++, networks, and Linux/Windows administration.

Skills

Languages	TypeScript, JavaScript, Python, Rust, C++20, SQL
Backend	Node.js, FastAPI, Prisma, SQLAlchemy, PostgreSQL (RLS), Supabase, Redis, REST APIs
Frontend	React 19, Next.js, Vite, Tailwind CSS, Motion, TanStack Query, Figma
AI	LLM API integration (OpenAI, Anthropic, Groq, TypeSafe), chatbots, agentic dev workflows
DevOps & Tools	Git, GitHub, Docker, Vercel, Linux, CMake, GoogleTest
Spoken languages	Spanish (native), English (C1)
